

Vectrex

Vectrex High Performance Video Game Machine

Vectrex is the first and only video game machine that can truly be classified as HIGH PERFORMANCE. Just like a Formula 1 race car is designed for professional drivers, Vectrex has been developed to offer the serious video gamer a look, action and power that leaves all other leading systems in the dust.

Exclusive Built-In Screen— No TV Set Needed

HIGH PERFORMANCE means a video game machine so advanced that it contains its own built-in screen with laser sharp vector graphics that move faster, more smoothly and provide incredible visual effects. You'll get 3-D movement, zooming and more effects than other home systems that are dependent upon the limited technology of the family television set. Plus, the Vectrex sound chip gives you explosive effects and a built-in voice synthesis capability no other system can duplicate. And Vectrex is the only completely portable system...so you can pick it up, plug it in and play it almost anywhere!

High Performance also means game play designed for the serious video gamer. The challenge and excitement of Vectrex can only be compared to real arcade play. Even the control panel has been designed to offer arcade-like response and action with features like a full 360° self-centering joystick and four large action buttons.

THE HIGH PERFORMANCE MACHINE

Vectrex High Performance Add-On Components

This year, Vectrex will offer even greater challenge and excitement with two new add-on components that plug directly into the Vectrex console. You'll experience a whole new world of video game play and learning that other systems simply can't match.

Vectrex Light Pen A Unique Learning Tool!

Vectrex is the only system of its kind with an optional, affordable Light Pen that makes learning fun! It allows you to interact directly with

the built-in Vectrex screen to create brilliant graphic effects, compose music, play specially developed educational games and even create animation. The Light Pen will be introduced with a wide array of exciting cartridges.

Vectrex 3-D Imager™ — Real 3-D... In Color

The new Vectrex 3-D Imager will take you into a whole new world of video games with effects that are more exciting than even the most advanced arcade games. Strap on the 3-D Imager, plug in a special Vectrex 3-D cartridge, and get ready for a real 3-D experience —

in color — that will surround you and draw you into

the action like no other system can. Special 3-D game cartridges for the Vectrex 3-D Imager will also be available.

High Performance Computer Components — In Development

High Performance means much more than just great games. It means a system that is expandable into a complete home entertainment and learning center with computer components.

A full-function, typewriter-style keyboard is now under development for Vectrex. With the keyboard, which will plug directly into the Vectrex console, you'll have a versatile computer at your fingertips. Included with the keyboard will be a memory expander adding both ROM and RAM to the already powerful memory built into the Vectrex console. And the ability to program in BASIC will be built right in. With a Vectrex wafer tape storage device, you'll be able to save and recall your favorite programs.

A full complement of compatible computer software is also being developed for use with the Vectrex keyboard. You'll be able to create your own video games, compose music, create stunning graphics and visual effects, and much more!

High Performance Cartridges That Transport You to the Stars and Beyond

With a constantly expanding library of game cartridges, including some of the most popular arcade classics, Vectrex can take you places no other home system can. You will be challenged with *Intergalactic Missions*, *Terrestrial Adventures*, and *Sporting Encounters* that will demand all of your skill and concentration.

Mine Storm™, a fast-paced game in the Intergalactic Missions Series, is programmed right

into the machine so you can begin playing Vectrex the minute you plug it in.

COMING SOON...
